

Mohamad Khaleghy

Senior Mobile Developer

PERSONAL STATEMENT

6+ years of experience in Mobile Application development using Android Technologies. Extensive experience in design, development, and deployment of Android Applications. Proficient with Kotlin, JAVA, Android SDK and various versions of Android OS.

WORK EXPERIENCE & PROJECTS

Middleman Library

Middleman is a library for helping handling items in RecyclerView adapters with better following SOLID rules.

It supports both simple list and paging list in RecyclerView.

Tech Lead Android Developer

Gap Messenger – Jan 2019 – Present

Responsibilities:

I work on Gap messenger as a Tech lead android developer to help the Android team to convert their legacy codes to new architected design, with consideration of best practices and libraries that currently available.

<https://play.google.com/store/apps/details?id=com.gapafzar.messenger>

Senior Mobile Developer

TGBS co - February 2017 – Nov 2018

Responsibilities:

I work on Iranapps project that is an android market.

Maintain and refactor the legacy code, add new features, cooperate with backend developers and designers to find the best approach to add new features. Help other Android developers in the company.

I refactor many features in the app and upgrade target SDK from 22 to 28.

I work on reported bugs in fabric "crash report service" and increase the crash free users to 99%

Work on App Compatibility with device webservice:

This is the service that checks compatibility between apk and the user device and my responsibility was resolve reported bugs and increase the performance of the service.

I need visa sponsorship

All games was free and anybody can use it my job was finding a way to injecting the code that makes the games purchasable for our users. I wrote a library that automatically decompile the apks then inject the purchase code then repackage the apk and signed again.

Work on Hambazi project:

The plan was create a new application with all existing features of iranapps project. but in the future iranapps and hambazi become more independent from each other and may have more independent features. I manage and design way to handle this in git and declare a rules that help us to have a code without duplication and good flexibility in each module.

Android Application Developer

Sahapardazesh - Aug 2016 – Feb 2017

Responsibilities:

I work on a project that belongs to NIOPDC “National Iranian Oil Products Distribution Company”
The project was a dynamic form creator and navigation app for NIOPDC inspectors.

Android Application Developer

Radrayane - Dec 2014 – Jun 2016

Responsibilities:

The biggest project that we create was a check in check out application “Taha”:

In Iran as an employer, if you want to check your employees time that they came to the office or live the office you have to buy an expensive fingerprint device, our goal was to decrease that cost. We build an application that employees install on their devices and when they came to office application automatically detects their entrance and when they leave the office application automatically detects their exit too. It has other features as you can chat with the other employees and request to leaving the office from your boss.

Android Application Developer

As a Habit - OCT 2012 – DEC 2014

I work with android as a habit and showable result for that two years is scientific calculator ahoocalc that's currently available on play store and the special feature that's make different between this and other calculators, is that you can solve parametric math problems in it. It means that you can have real variables in it and not just constants.
